CED-DxS to SNOMED CT Mapping, v4.1

This file contains an alpha-version mapping of the common terms in version 7.2 of the CED-DxS (Canadian Emergency Department Diagnosis Shortlist) mapped to a concept in SNOMED CT (Systematized Nomenclature of Medicine — Clinical Terms) and to a code in ICD-10-CA (*International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Canada*).

This alpha version has been made available for testing. To submit feedback or questions, send an email to nacrspicklists@cihi.ca.

This product includes information from the SNOMED CT Canadian Edition — September 30, 2021, release. For more information, please refer to the [Terms of Use](#).

Please note that the fully specified name (FSN) is not included in the SNOMED CT mappings.

Table 1 CED-DxS common term to SNOMED CT mapping methodology

CED-DxS common term to SNOMED CT mapping methodology
Select the SNOMED CT term (synonym) that is an exact match of the common term.
Select the SNOMED CT term that most closely matches the common term. The semantic tags include (disorder), (disease), (situation) and (event).
When selecting a SNOMED CT term, if a listed synonym does not match the common term exactly, the preferred term is selected over the acceptable.
If there is no exact match to the acronym, the full common term description with/without the acronym is selected.
If the common term is represented using a dash or slash to separate multiple common terms, all SNOMED CT terms are selected (could be the same Concept ID or different).
When there is ambiguity in selecting a concept, parent concepts are reviewed for context in order to select the best fit.
When the common term includes specificity, such as “with and/or without open wound” or “with or without complication” and there is no exact SNOMED CT term match, the generic term is selected based on the common term.
“Complicated/with complication” is not defined in SNOMED CT; therefore, the definition of “complicated” from ICD-10 is applied.
Diagnosis N/A is not mappable to SNOMED CT.
Dislocations
Select “Dislocation” and a specific site (some have a dislocation or subluxation [e.g., Disloc wrist]); or
If “Dislocation” does not exist, the next best is “dislocated by site” (i.e., hx statement); and/or
If a specific site has both “open” and “closed” as separate SNOMED CT concepts, select “closed.”
Sprains and strains
Assign SNOMED CT concepts for sprain and strain separately when mappings are available.
Assign “Sprain” if the only SNOMED CT concept available is for both sprain/strain of a specific site.
If the common term is a strain of a specific site and the SNOMED CT concept is not available, select muscle and/or tendon for the specific region.
If the common term is a strain of a specific site and the SNOMED CT concept provides independent selections for strain of muscle and tendon, assign both.
Amputations
Consider all amputations as traumatic diagnostic statements. Example: “Amputation leg” means traumatic amputation of leg, not amputation of leg (procedure) or history of amputation (situation).

Table 2 v4.1 SNOMED CT-EN

This table contains a mapping of the common terms in version 7.2 of the CED-DxS mapped to a SNOMED CT concept.

Note: Terms and codes with an asterisk (*) have been updated since v4.0 SNOMED CT-EN.

CED-DxS English common term	SNOMED CT Concept ID	Description ID	SNOMED CT description	CED-DxS ICD-10-CA code
